

SecurEnvoy The future of authentication

SecurEnvoy is pioneering the authentication space to meet the growing security needs of modern businesses.

Today's organisations need watertight security, particularly now that 'cloud computing' has empowered users to access data any time, from anywhere. However, they also need cost savings, optimum productivity and a renewed focus on environmental action. So SecurEnvoy's ethos is simple: Give control back to businesses and users without compromising on security or access.

Unlike traditional authentication solutions, SecurEnvoy's suite of products can be installed and integrated into existing IT systems quickly. And crucially, they avoid the need for much of the additional cost or remote deployment of the traditional approach to security software, creating an unprecedented zero-footprint solution while ensuring long-term cost benefits.

A global leader in business authentication, SecurEnvoy's products – SecurAccess, SecurPassword, SecurICE and SecurMail – have been adopted by businesses all over the globe.

By strengthening mobile security without breaking business budgets, SecurEnvoy helps you manage risk, maximise reward and retain control of your sensitive data.

SecurPassword

Secure control in the hands of the users

With our growing reliance on IT, the number and complexity of passwords per user can really add up. And when they need to be changed, your IT helpdesk could land you with some serious overheads.

SecurEnvoy has designed a two-factor authentication solution that connects the user to a self-help webpage, using a time-sensitive passcode delivered to their mobile phone.

This 100% secure authentication method is in line with SecurEnvoy's zero-footprint approach and hardware philosophy. There's no need for additional devices or authentication tokens – simply the user and their mobile.

Once the passcode is received, the user connects with the webpage using secret information such as their employee number. Here, they simply enter a new password, and SecurPassword resets it in the Active Directory in real time.

This way, there's no need for IT to get bogged down in password management – and your corporate system remains completely secure. SecurPassword integrates with existing systems including Microsoft, eDirectory, Sun Directory and OpenLDAP.

SecurPassword is changing the game for personal authentication. No tokens, no fuss... Just rock-solid, two-factor security to take the pressure off IT.

Benefits

- Increased business productivity
- Two-factor password reset using mobile phones
- Additional configurable security questions
- Information stored and read from Microsoft Active Directory
- Supports any GSM mobile phone with no software required

Proven return on investment

- The average helpdesk cost of a password reset is £14.
- Password resets will cost a company with 1,000 users £88,200 a year.
- SecurPassword will create savings of £80,700 (91%) a year.
